

PYTHIAN KICK ANALYTICS AS A SERVICE FOR MICROSOFT AZURE

DRIVE BETTER BUSINESS OUTCOMES WITH DATA

HIGHLIGHTS

- Enables self-service analytics for both technical and business users including visualizations - and supports BYOA (bring your own analytics tools)
- Removes data silos as users across the organization are always working from a single integrated data hub
- Takes advantage of the scalability inherent in Microsoft Azure to scale easily and cost effectively as your needs evolve
- Provides easy access to and sharing of data and analytics assets
- Fully managed and supported system - from system setup, to data source orchestration, to analytics visualization and 24X7 operations

By putting the power of data analytics in the hands of your business users, they can make better, more informed decisions every day. Pythian Kick Analytics as a Service (AaaS) for Microsoft Azure makes this possible, letting you harness the potential of your data to improve business outcomes without relinquishing control of valuable data assets to a software vendor or defocusing your IT and BI teams.

Kick AaaS for Azure is a proven and customizable end-to-end solution that helps you maintain control of your data assets while getting you to the business results you need—faster.

ENABLES BETTER INSIGHTS AND SMARTER DATA PRODUCTS

Kick AaaS for Microsoft Azure puts your data to work, integrating multiple data types from both internal and external sources to quickly answer your questions or to make your data products more intelligent. It enables machine learning advanced and predictive analytics at scale.

COST EFFECTIVE AND SCALABLE

This flexible and scalable cloud solution reduces your cost-per-answer and time-to-answer. It's customized for your data, and your particular use cases to address your immediate analytics requirements, and to grow as your needs evolve. In other words, you can start with just one business need or question, then expand the service as required.

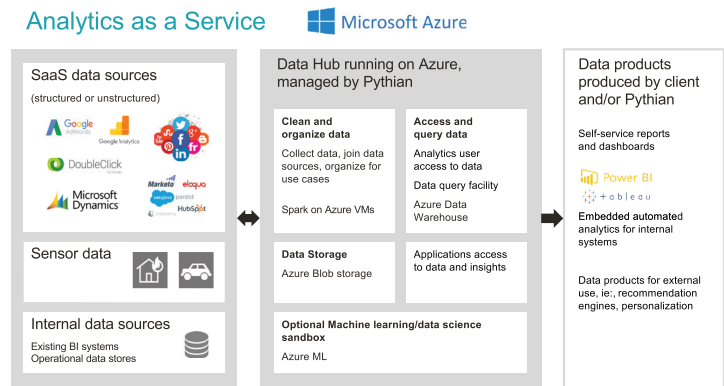

ENABLES SELF SERVICE ANALYTICS

Kick AaaS ensures multi-source integrated data is always up-to-date, so your entire organization is consistently working from a single version of the truth. Our real-time data hub plays a critical role in self-service analytics across the enterprise, ensuring everyone in your company can access the insights and data they need, with the analytics tools they prefer to use.

HOW IT WORKS

Pythian Kick Analytics-as-a-Service is a customized end-to-end service solution that takes the hard work out of data collection, organization, and transformation. Our next generation data platform is built on Microsoft Azure, and uses open-source technologies and Azure services for scalable, flexible operation. The platform ingests, transforms, and integrates your data sources, then organizes the data for analytics, analytics user visualizations, advanced analytics development, machine learning, or exporting analytics to other systems.

We plan, implement, and manage the data hub in the cloud to blend data from all sources. We provide analytics and advanced analytics support to accelerate the translation of data into useful information and offer 24/7 ongoing operational support and ongoing feature releases.

GETTING STARTED WITH KICK AaaS

KICK AaaS KICK START PROGRAM: This program helps you get quick time-to-value with a hardened, production system that delivers deep insights from three of your most critical data sources in less than 60 days.

ANALYTICS AND DATA WAREHOUSE MODERNIZATION WORKSHOP (1 DAY): Start with this one-day workshop to develop a high-level plan to take advantage of cloud from developing a modern data warehouse through to taking advantage of Kick AaaS.

KICK AaaS READINESS ASSESSMENT (5 DAY WORKSHOP): If you're considering a fully-featured analytics solution that enables deep insights, data science and machine learning applications, let our experts map out your success with Kick AaaS in this five-day, on-site workshop.

PYTHIAN KICK AaaS PROOF OF CONCEPT: Experience the value of Kick AaaS with a PoC that uses your data to deliver a sample report.

INCLUDED WITH PYTHIAN ANALYTICS AS A SERVICE

- Development and implementation of one analytics use case
- Fully-managed data hub that integrates data from any number of sources
- 24/7 ongoing operational support for maximum system availability and performance
- Ongoing feature releases
